

Package ‘audrex’

October 12, 2022

Type Package

Title Automatic Dynamic Regression using Extreme Gradient Boosting

Version 2.0.1

Author Giancarlo Vercellino

Maintainer Giancarlo Vercellino <giancarlo.vercellino@gmail.com>

Description Dynamic regression for time series using Extreme Gradient Boosting with hyperparameter tuning via Bayesian Optimization or Random Search.

Description

Dynamic regression for time series using Extreme Gradient Boosting with hyper-parameter tuning via Bayesian Optimization or Random Search.

Usage

```
audrex(  
  data,  
  n_sample = 10,  
  n_search = 5,  
  smoother = FALSE,  
  seq_len = NULL,  
  diff_threshold = 0.001,  
  booster = "gbtree",  
  norm = NULL,  
  n_dim = NULL,  
  ci = 0.8,  
  min_set = 30,  
  max_depth = NULL,  
  eta = NULL,  
  gamma = NULL,  
  min_child_weight = NULL,  
  subsample = NULL,  
  colsample_bytree = NULL,  
  lambda = NULL,  
  alpha = NULL,  
  n_windows = 3,  
  patience = 0.1,  
  nrounds = 100,  
  dates = NULL,  
  acq = "ucb",  
  kappa = 2.576,  
  eps = 0,  
  kernel = list(type = "exponential", power = 2),  
  seed = 42  
)
```

Arguments

| | |
|----------|---|
| data | A data frame with time features on columns. |
| n_sample | Positive integer. Number of samples for the Bayesian Optimization. Default: 10. |

| | |
|------------------|---|
| n_search | Positive integer. Number of search steps for the Bayesian Optimization. When the parameter is set to 0, optimization is shifted to Random Search. Default: 5, |
| smoother | Logical. Perform optimal smoothing using standard loess. Default: FALSE |
| seq_len | Positive integer. Number of time-steps to be predicted. Default: NULL (automatic selection) |
| diff_threshold | Positive numeric. Minimum F-test threshold for differentiating each time feature (keep it low). Default: 0.001. |
| booster | String. Optimization methods available are: "gbtree", "gblinear". Default: "gbtree". |
| norm | Logical. Boolean flag to apply Yeo-Johnson normalization. Default: NULL (automatic selection from random search or bayesian search). |
| n_dim | Positive integer. Projection of time features in a lower dimensional space with n_dim features. The default value (NULL) sets automatically the values in c(1, n features). |
| ci | Confidence interval. Default: 0.8. |
| min_set | Positive integer. Minimum number for validation set in case of automatic resize of past dimension. Default: 30. |
| max_depth | Positive integer. Look to xgboost documentation for description. A vector with one or two positive integer for the search boundaries. The default value (NULL) sets automatically the values in c(1, 8). |
| eta | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric between (0, 1] for the search boundaries. The default value (NULL) sets automatically the values in c(0, 1). |
| gamma | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric for the search boundaries. The default value (NULL) sets automatically the values in c(0, 100). |
| min_child_weight | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric for the search boundaries. The default value (NULL) sets automatically the values in c(0, 100). |
| subsample | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric between (0, 1] for the search boundaries. The default value (NULL) sets automatically the values in c(0, 1). |
| colsample_bytree | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric between (0, 1] for the search boundaries. The default value (NULL) sets automatically the values in c(0, 1). |
| lambda | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric for the search boundaries. The default value (NULL) sets automatically the values in c(0, 100). |
| alpha | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric for the search boundaries. The default value (NULL) sets automatically the values in c(0, 100). |

| | |
|-----------|---|
| n_windows | Positive integer. Number of (expanding) windows for cross-validation. Default: 3. |
| patience | Positive numeric. Percentage of waiting rounds without improvement before xgboost stops. Default: 0.1 |
| nrounds | Positive numeric. Number of round for the extreme boosting machine. Look to xgboost for description. Default: 100. |
| dates | Date. Vector of dates for the time series. Default: NULL (progressive numbers). |
| acq | String. Parameter for Bayesian Optimization. For reference see rBayesianOptimization documentation. Default: "ucb". |
| kappa | Positive numeric. Parameter for Bayesian Optimization. For reference see rBayesianOptimization documentation. Default: 2.576. |
| eps | Positive numeric. Parameter for Bayesian Optimization. For reference see rBayesianOptimization documentation. Default: 0. |
| kernel | List. Parameter for Bayesian Optimization. For reference see rBayesianOptimization documentation. Default: list(type = "exponential", power = 2). |
| seed | Random seed. Default: 42. |

Value

This function returns a list including:

- history: a table with the models from bayesian (n_sample + n_search) or random search (n_sample), their hyper-parameters and optimization metric, the weighted average rank
- models: a list with the details for each model in history
- best_model: results for the best selected model according to the weighted average rank, including:
 - predictions: min, max, q25, q50, q75, quantile at selected ci, mean, sd, skewness and kurtosis for each time feature
 - joint_error: max sequence error for the differentiated time features (max_rmse, max_mae, max_mdae, max_mape, max_mase, max_rae, max_rse, max_rrse, both for training and testing)
 - serie_errors: sequence error for the differentiated time features averaged across testing windows (rmse, mae, mdae, mape, mase, rae, rse, rrse, both for training and testing)
 - pred_stats: for each predicted time feature, IQR to range, divergence, risk ratio, upside probability, averaged across prediction time-points and at the terminal points
 - plots: a plot for each predicted time feature with highlighted median and confidence intervals
- time_log

|------------------|----------------------------------|
| bitcoin_gold_oil | <i>bitcoin_gold_oil data set</i> |
|------------------|----------------------------------|

Description

A data frame with different time series (prices and volumes) for bitcoin, gold and oil.

A data frame with different time series (prices and volumes) for bitcoin, gold and oil.

Usage

```
bitcoin_gold_oil
```

```
bitcoin_gold_oil
```

Format

A data frame with 18 columns and 1827 rows.

A data frame with 18 columns and 1827 rows.

Source

Yahoo Finance

Yahoo Finance

climate_anomalies *climate_anomalies data set*

Description

A data frame with different two time series on global mean temperature anomalies (GMTA) and global mean sea level (GMTA).

Usage

climate_anomalies

Format

A data frame with 2 columns and 266 rows.

Source

Datahub.io, Climate-change collection

covid_in_europe *covid_in_europe data set*

Description

A data frame with with daily and cumulative cases of Covid infections and deaths in Europe since March 2021.

A data frame with with daily and cumulative cases of Covid infections and deaths in Europe since March 2021.

Usage

covid_in_europe

covid_in_europe

Format

A data frame with 5 columns and 163 rows.

A data frame with 5 columns and 163 rows.

support functions for audrex

Description

support functions for audrex

Usage

```
engine(  
  predictors,  
  target,  
  booster,  
  max_depth,  
  eta,  
  gamma,  
  min_child_weight,  
  subsample,  
  colsample_bytree,  
  lambda,  
  alpha,  
  n_windows,  
  patience,  
  nrounds  
)
```

Arguments

| | |
|------------------|---|
| predictors | A data frame with predictors on columns. |
| target | A numeric vector with target variable. |
| booster | String. Optimization methods available are: "gbtree", "gblinear". Default: "gbtree". |
| max_depth | Positive integer. Look to xgboost documentation for description. A vector with one or two positive integer for the search boundaries. The default value (NULL) sets automatically the values in c(1, 8). |
| eta | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric between (0, 1] for the search boundaries. The default value (NULL) sets automatically the values in c(0, 1). |
| gamma | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric for the search boundaries. The default value (NULL) sets automatically the values in c(0, 100). |
| min_child_weight | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric for the search boundaries. The default value (NULL) sets automatically the values in c(0, 100). |

| | |
|------------------|---|
| subsample | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric between (0, 1] for the search boundaries. The default value (NULL) sets automatically the values in c(0, 1). |
| colsample_bytree | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric between (0, 1] for the search boundaries. The default value (NULL) sets automatically the values in c(0, 1). |
| lambda | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric for the search boundaries. The default value (NULL) sets automatically the values in c(0, 100). |
| alpha | Positive numeric. Look to xgboost documentation for description. A vector with one or two positive numeric for the search boundaries. The default value (NULL) sets automatically the values in c(0, 100). |
| n_windows | Positive integer. Number of (expanding) windows for cross-validation. Default: 3. |
| patience | Positive numeric. Percentage of waiting rounds without improvement before xgboost stops. Default: 0.1 |
| nrounds | Positive numeric. Number of round for the extreme boosting machine. Look to xgboost for description. Default: 100. |
